PROJECTS

VERTICAL AXIS WINDMILL

A vertical-axis wind turbine is a type of wind turbine where the main rotor shaft is set transverse to the wind while the main components are located at the base of the turbine.

EFFECT OF MECHANICAL PROPERTIES ON ZIRCONIUM SAND REINFORCE ALUMINUM ALLOY MATRIX

2014 aluminium alloy (aluminum) is an aluminium-based alloy often used in the aerospace industry. It is easily machined in certain tempers, and among the strongest available aluminium alloys, as well as having high hardness.

Effects of the tool wear on technological performance measures: • Increase the cutting force • Increase the surface roughness • Decrease the dimensional accuracy
